

CONCRETE THINKING FOR A SUSTAINABLE FUTURE

Understanding and Applying Sustainable Building Practices

Overview

It is time for the construction industry to take a practical look at how sustainable construction can be effectively implemented. The concrete industry is committed to doing its part in helping the construction industry to achieve its sustainable construction goals. It is through team work that we will make it happen. Come find out how, together, we can make it happen.

Why Attend?

There has been a lot of talk about sustainable design and construction. There are a few who have actually started to incorporate this philosophy into their existing business practices, but what about the rest of the construction industry? In order for these concepts to have an impact, we all need to understand how we can do our part to reduce the impact that buildings have on Canadians and our environment while remaining economically viable. The cement and concrete

manufacturers have brought together in each city local experts and practitioners from whom we can all learn the steps needed to do our part in meeting our own needs without compromising the ability of future generations to meet their own needs.

In addition to gaining a practical, hands-on understanding of this subject, your attendance will help local green building chapters to achieve their goal of bringing information on this subject to your community. How? The cement and concrete manufacturers support the chapters and have committed to contributing proceeds gained from these sessions to these local, volunteer organizations.

So come learn while supporting sustainable construction in your community.

Sustainable Construction Roadshow 2004 – Vancouver

Addresses the needs of professionals in the design and construction of all types of commercial, institutional and high-rise buildings.

- Architects
- Engineers
- Contractors
- Renovators
- Designers
- Specifiers
- Developers and Building Owners
- Technologists
