Dear Lehigh Customer:

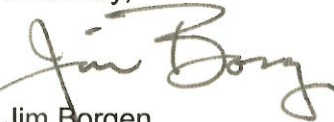

Lehigh Cement has had a long standing commitment to environmentally sound building practices. Building on this foundation, Lehigh is now able to offer our customers the services of an in house LEED® Accredited Professional (AP). Our Technical Services Specialist, Bryan Russell, is now a certified LEED® AP. Bryan's achievement demonstrates our commitment to help you and your customer to meet green building goals.

The Canadian Green Building Council (CaGBC) certifies projects that deliver environments that are healthier, more productive and minimize their environmental impact. The LEED® AP's role in the process is to provide project specific interpretations of the LEED® Green Building Rating System and to assist project teams in their goal to achieve the LEED® credits they have targeted. The LEED® AP can also suggest strategies to help improve environmental performance and in turn gain more credits from the CaGBC. For more information on LEED® and the CaGBC go to www.cagbc.org.

Bryan has over 35 years of experience in the concrete and construction industry, with more than 30 of these years in a technical services capacity. He has been a part of the Lehigh team since 1987 and has championed our company's commitment to innovation and environmental stewardship.

We take great pride in Bryan's accomplishment in becoming a certified LEED® AP. This achievement is a tremendous asset to our industry, and we hope that you take advantage of this resource as you address the specifics of concrete and other cement based products in sustainable construction projects.

Sincerely,

Jim Borgen
Vice President Sales
Lehigh Northwest Cement
